LAST**

WOOD PROCESSING EQUIPMENT

A Quality Machine—Any Way You Split It

## WELCOME

Welcome to Timberwolf! Choosing the best wood processing equipment for the job is an important decision. That's why people who are serious about firewood buy Timberwolf.

Since our start more than a decade ago, we've engineered our machines to the highest commercial standards. We use the finest materials available and all of our machines are proudly made in the USA. It is this quality and craftsmanship of the entire Timberwolf product line that sets us apart from all others. Our track record speaks for itself. All you have to do is ask someone who owns a Timberwolf!

You'll never see a Timberwolf in a chain store. We only sell through dealers—and that means great, local service for you. Selling through the dealer network is our way of ensuring that you get the equipment that's right for you. Our dealers are

knowledgeable and experienced and can help you every step of the way.

In addition to Timberwolf dealers, the website ([www.timberwolfcorp.com](http://www.timberwolfcorp.com)) details our complete line of log splitters, wood processors and conveyors. Log on and watch videos of the log splitters in action or read about how to start or grow a firewood business—from log splitters for home, farm or professional use, to firewood conveyors and processors—it's all there.

All the Best,

**Dave Therrien**  
Chief Executive Officer

# CHOOSING THE RIGHT MACHINE

Each Timberwolf log splitter has special features that make it the perfect tool for the job. But there's one thing all of the gas-powered machines have in common—a Honda GX commercial-grade engine—for years of easy starting and trouble-free maintenance.

The economical **TW-P1** is perfect for small production home or farm use. The **TW-HV1** and **TW-HV2** give you versatility of 2 splitting positions: vertical or horizontal. With a 9-second cycle time, the **TW-2** and **TW-2HD** take wood splitting production up a notch, making them ideal for landowners who produce more than 10 cords per year. Farmers and tractor owners will like the **TW-3's** PTO hydraulics that can operate at idle and still have plenty of power to get the job done. **TW3-HD** is a heavier duty

version of the TW-3. It generates 22 tons of splitting force and accepts most options. The new **S3** splitter simply attaches to your existing skid steer—split large, unwieldy logs into manageable chunks without getting out of the cab. **TW-5** and **TW-5FC** are two of the fastest, most popular commercial units in the industry. "FC" stands for fast cycle time—a blistering 6 seconds! Pro's love the **TW-6**. It boasts a twin-cylinder 18 HP OHV Honda GX engine, producing 28 tons of splitting force with an 8-second cycle time. The **TW-7** allows you to produce perfect firewood with its unique "box" wedge, while the **TW-10** splits logs up to 10' and delivers an incredible 50 tons of splitting force! The remote control unit comes with a 50 GPM pump and generates over 60 tons.

## Uncompromising durability and performance

*You could call them the ultimate power tools. Precision engineering and rugged dependability go into every Timberwolf machine. The comprehensive product line includes more than 14 different log splitters, and 4 conveyors—each one built to be the best match for the job. All of our products are custom built in the USA to last a lifetime. Whether you do it professionally, for extra money, or for your own use—any Timberwolf log splitter or conveyor you choose will provide the durability and performance you would expect from the best log splitter you can buy.*

## A Quality Machine—Any Way You Split It

### ANATOMY OF A TIMBERWOLF LOG SPLITTER

What makes a Timberwolf the best log splitter you can buy? Start with the latest metal fabrication technology, fold in a generous helping of the highest quality workmanship and components, add a reliable commercial-grade Honda GX engine, and a durable powder-coated finish and you've got yourself an awesome splitting machine that'll want to keep working long after the sun goes down!

All of our log splitters are designed to help you get the most out of producing firewood. They're faster, easier and more reliable.

The commercial-grade hydraulic system provides the power behind the punch. The large tanks hold plenty of fluid, and rugged hoses and sturdy controls make sure you can power through the most difficult logs. Since Honda engines are the most reliable in the business, it was a

no-brainer to add them to all of our machines. Industrial strength H-beam frames reinforce the Timberwolf trademark of rugged dependability. When the TW-6 was featured on the Discovery Channel's "Monster Garage", the frame had to be cut in half. That was no easy task. It took five burly crewmembers to cut that frame to fit in the car—another testament to Timberwolf's heavy-duty construction.

So many logs, so little time. With the optional "back-saver" package—log lift, table grate and a 4 or 6-way wedge—you can dramatically increase your splitting production with ease. Check out our back-saver package and get the job done in half the time or less without breaking your back in the process!

*"This machine is a remarkable product! We've already split over 10 cords in a few short sessions! We were especially impressed with its first task...a 4-ft diameter fir with the world's worst knots. The TW-3 waltzed right through it!! Another nice surprise is the fact that our tractor runs the splitter at darn-near an idle!! You guys are really building a superior splitter!"*

—Mark E. and Pat F.

*"I can't say enough about my TW-6. I wore out my [other brand] machine after just a couple years of heavy usage. Since then, I've tried other brands with no success until I finally purchased a Timberwolf. I did the math and I'm already making a return on my investment."*

—Jason N, St. Louis, MO

- Reliable and quiet, easy-start commercial grade Honda GX engines on all units
- Fast and powerful Hydraulic System—large tank and quality controls
- 4-way and 6-way Wedges cut through your workload
- Optional "Back Saver" Log Lift does the heavy lifting
- Optional "Back Saver" Table Grate available for most models
- Rugged, heavy-duty H-Beam frame with exclusive powder-coated finish
- Always ready to go with heavy-duty hitch and DOT approved tires

TW-6 shown with optional hydraulic log lift, table grate and 6-way wedge.

### More about the TW-7 Splitter

#### Q: What Makes a TW-7 Different?

A: It's a machine that specializes in producing perfect camp firewood...perfect for bundling—in 8 seconds flat! A "box" wedge with five vertical blades regulates the width while a horizontal blade controls the height. With 28 tons of force and 8-second cycle time, the TW-7's wood-splitting specialty is a testament to Timberwolf's ability to produce a large, diverse line of log splitters—each one standing on its own merits. Do the math and bundle up the profits!

TW-7 with standard 2-way wedge is designed to split through the gnarliest wood.

Unique box wedge, designed for straight grain, produces perfect camp firewood every time.

"I bought my TW-6 in 1995 and it's still going strong! I produce about 80-100 cords of wood a year as a side job to my tree service. The machine is incredibly reliable, powerful and fast. I've had no problems with it. The other day, my TW-6 split a 3-foot diameter log like it was nothing!

—Dean K, Hancock, MA

"This is such an incredible machine. I produce bundle after bundle of firewood. My business has grown substantially in the last four years, thanks to my TW-7. It's fast, dependable and easy to use."

—Don A, Austin TX

Some models shown here include optional log lift, table grate and 4 or 6-way wedge. <sup>1</sup> Specs subject to change without notice. <sup>2</sup> Available in 36" and 48" lengths. \* Includes 4-way wedge.

\*\* 6-way box wedge and regular 2-way wedge come standard; 4, 6-way wedges are optional.

## Timberwolf Conveyors

Timberwolf fills an important position in the conveyor market with the **C20** (20 ft.), **C24** (24 ft.), and **C26** (26 ft.). A heavy-duty steel frame supports 18" wide two-ply polyester Rough Top™ belting (1" T-cleats are optional). The optional hydraulic top drum drive gives operators greater convenience—simply

stop and back up the conveyor belt for easy handling of monster logs that need resplitting.

Our 30-foot, all-steel firewood conveyor, the **C30 HD**, comes standard with a hydraulic top drum drive. The wood is pulled up the steel trough by 1" square steel cleats attached to the drive chain.

All of these commercial-grade firewood conveyors come standard with the reliable Honda GX engine. They can also be powered by your firewood processor's hydraulic system.

C24 with optional hydraulic drive. Shown with the TW-6.

"My Timberwolf 30' steel conveyor is really critical to my business. I split about 200 cords of wood a year and in my line of work, I need to be diversified in my service offerings. During the late winter months, when it's too muddy to log, my processor produces enough firewood to supplement my logging business."

—Todd B, logger, part-time firewood seller, Castleton, VT

## Timberwolf Accessories

### WORK SMART, NOT HARD WITH OUR "BACK-SAVER" PACKAGE

Making the most rugged, compact, fast and reliable log splitter wasn't enough for Timberwolf engineers. They took into consideration the human mechanics of log splitting and designed the optional components—together called the "back-saver" package—log lift, table grate and 4- or 6-way wedge. The easy action of the log lift, combined with the efficient 6-way wedge and the convenience of the table grate will make lifting heavy logs or bending constantly to lift wood a thing of the past.

#### BEFORE

Another precious weekend lost because you pulled your back...again.

#### AFTER

You split 6 cords of wood yesterday with your TW-6, just caught your fourth rainbow and still have a whole day of fishing ahead of you.

*Optional Table Grate: Catches the split logs at waist level, so you don't have to reach to the ground to pick them up.*

*Optional Log Lift: Whether manual or hydraulic, the log lift will take care of those heavy, hard-to-lift logs with ease—up to 500 lbs!*

*Optional 6-way Wedge: Splits through the toughest wood while dramatically decreasing your total splitting time.*

## Timberwolf Website

### www.timberwolfcorp.com

Timberwolf's website is the source for all your log splitting and wood processing needs! From complete product specifications and **demonstration videos**, to industry news and how-to articles about starting and growing your firewood business - it's all here and available 24/7. Click the "Free Needs Profile" button at the top of the page, fill out and submit the form and let us provide you a recommendation based on your needs.

Technology is your friend. And Timberwolf's website is the place to find all of the information you'll need. Just log on and get complete details about everything we make. It's all here—trade show schedules, even video demonstrations of Timberwolf log splitters in action. Plus, see full color pictures and diagrams of our products, too.

Thinking of starting your own firewood business?
