Gas-powered by HONDA ENGINES	Entry-level model perfect for home or farm use. Rugged and reliable Honda engine. Accommodates a 4-way wedge, log lift and table grate.	Versatile design—use horizontally or vertically. Split large chunks safely on the ground.	Same features as the HV1, but with 25 tons of splitting force, larger engine, faster cycle time, larger wheels and tires.	A rugged machine made to endure heavy use. Ideal for landowners who produce more than 10 cords of wood per year.	Entry-level commercial unit with heavier components and auto-cycle hydraulics. Smallest unit to accept hydraulic log lift.	A PTO-powered splitter is a natural fit for farmers and tractor owners.	Similar to TW-3, but with a larger cylinder and more power. Good for larger chunks and wood that's difficult to split.	Same machine as the TW-3HD but converted to mount and be powered by your skid steer's hydraulic system.	Most popular commercial unit—an industry standard engineered for maximum operating comfort and productivity.	If you're into speed, the 5FC is the way to go. With a 6-second cycle time, a 4-way wedge and auto-cycle hydraulics, your productivity will skyrocket.	Gives you the best of both worlds—speed and power—for those big, hard-to-split chunks	Designed with camp firewood producers in mind. Makes perfect splits every time, with our ingenious "box" wedge.	Split the impossible. Built to order, this monster splitter handles logs up to 10' long and 5' in diameter!

¹ Specs subject to change without notice. ² Available in 36" and 48" lengths. * Includes 4-way wedge.

** 6-way box wedge and regular 2-way wedge come standard; 4, 6-way wedges are optional.

YOU DO THE MATH.

Choosing the best log splitter for the job is a big decision. Whether you use it for splitting your own firewood or have a commercial operation, Timberwolf splitters can yield enough split wood to burn past your wildest expectations.

The optional "back-saver" package adds even more value to your splitter. The easy lever action of the manual or hydraulic log lift, the efficient 4- or 6-way wedge, and the convenient table grate, will make bending over to pick up heavy logs a thing of the past.

Every unit we make is delivered fully assembled, fully tested, and ready to run. All of our gas-powered splitters are built with a Honda GX commercial-grade engine. **We build every log splitter to be the last one you'll ever need.**

The economical **TW-P1** is perfect for home or farm. The **TW-HV1** and **TW-HV2** give you the versatility of 2 splitting positions: vertical or horizontal. With a 9-second cycle time, the **TW-2** and **TW-2HD** takes wood splitting up a notch, making them ideal for landowners who produce more than 10 cords per year. Farmers and tractor owners will like the PTO-driven **TW-3**. Because it's self-contained, it can operate at idle and still have plenty of power to get the job done. The **TW-3HD** is a heavier duty version of the TW-3. It generates 22-tons of splitting force and comes standard with our 4-way wedge. The new **S3HD** splitter simply attaches to your existing skid steer so you can split large, unwieldy logs into manageable chunks with ease.

TW-5 and **TW-5FC** are two of the most popular and productive units in the industry. "FC" stands for fast cycle time—a blistering 6 seconds! The pro's choice, **TW-6**, boasts a twin-cylinder 18 HP OHV Honda GX engine, producing 28 tons of splitting force with an 8-second cycle time. The **TW-7** lets a operator produce perfect firewood with its unique "box" wedge, while the **TW-10** has 50 tons of power with a 30 GPM pump. The remote control unit comes with a 50 GPM pump and generates over 60 tons.

More About TW-7

Q: What Makes a TW-7 Different?

A: It's a machine that specializes in producing six perfectly sized campfire logs—in 8 seconds flat! A "box" wedge with five vertical blades regulates the width while a horizontal blade controls the height. With 28 tons of force and 8-second cycle time, the **TW-7** is a testament to Timberwolf's ability to produce a large, diverse line of log splitters—each one standing on its own merits. Do the math and bundle up the profits.

TW-7 with standard 2-way wedge is designed to cut through the gnarliest wood.

TW-7 with standard box wedge is designed for straight grain, producing perfect camp firewood.

Conveyors

C24 conveyor shown here with Timberwolf's TW-6 log splitter

Timberwolf offers a complete line of commercial grade firewood conveyors in 20', 24', 26', 30' and 35' lengths. These self-contained workhorses are also available with hydraulic top drum drives, raised cleat belting, and chip separators.

Processors

PRO-HD Inline processor shown with optional 8-way wedge, electric auto-cycle system, oil cooler, and hydraulic deck lift

The **TW-PRO** line of firewood processors give a single operator the ability to process firewood from the safety and comfort of the operator's station at a rate of 1 to 3 cords an hour. Please contact Timberwolf for more information.

Whether manual or hydraulic, the log lift will take care of those heavy, hard-to-lift logs with ease.

6-way wedge cuts through the toughest wood while dramatically decreasing your total splitting time.

Our Customers Say It Best

"This machine is a remarkable product! We've already split over 10 cords in a few short sessions! We were especially impressed with its first task... a 4-ft diameter fir with the world's worst knots. The TW-3 waltzed right through it!! Another nice surprise is the fact that our tractor runs the splitter at darn-near an idle!! You guys are really building a superior splitter!" —Mark E. and Pat F.

"The TW-7 is a NICE machine. I'm already seeing a return on my investment." —Shawn F.

"I did a face cord in under 15 minutes with the multi-wedge!" —Joel C.

"Timberwolf's TW-P1 has got to be the best professional grade, homeowner-friendly splitter on the market. What a value." —Bob K.
