Gas-powered by HONDA ENGINES	Entry-level model perfect for home or farm use. Rugged and reliable Honda engine. Accommodates a 4-way wedge, log lift and table grate.	Versatile design—use horizontally or vertically. Split large chunks safely on the ground.	Same features as the HV1, but with 25 tons of splitting force, larger engine, larger wheels and tires.	A rugged machine made to endure heavy use. Ideal for landowners who produce more than 10 cords of wood per year.	Entry-level commercial unit with heavier components. Smallest unit to accept hydraulic log lift and auto-cycle.	A PTO-powered splitter is a natural fit for farmers and tractor owners.	Similar to TW-3, but with a larger cylinder and more power. Good for larger chunks and wood that's difficult to split.	Same machine as the TW-3HD but converted to mount and be powered by your skid steer's hydraulic system.	Most popular commercial unit—an industry standard designed for maximum operating comfort and productivity.	If you're into speed, the 5FC is the way to go. With a 6-second cycle time, a 4-way wedge and auto-cycle hydraulics, your productivity will skyrocket.	Gives you the best of both worlds—speed and power—for those big, hard-to-split chunks	Don't have to compromise when you're ready to hang up that maul...the TW-C1 delivers the same quality and dependability of our pro line of splitters.	Designed with camp firewood producers in mind. Makes perfect splits every time, with our ingenious "box" wedge.	Split the impossible. Built to order, this monster splitter handles logs up to 10' long and 5' in diameter!

¹ Specs subject to change without notice. ² Available in 36" and 48" lengths. ³ Available in 36".

** 6-way box wedge and regular 2-way wedge come standard; 4, 6-way wedges are optional.

Choosing the best log splitter for the job is a big decision. Whether you use it for splitting your own firewood or have a commercial operation, Timberwolf splitters can yield enough split wood to burn past your wildest expectations.

The optional "back-saver" package adds even more value to your splitter. The easy lever action of the manual or hydraulic log lift, the efficient 4- or 6-way wedge, and the convenient table grate, will make bending over to pick up heavy logs a thing of the past.

All of our gas-powered splitters are built with a Honda GX commercial-grade engine and come fully assembled, fully tested and ready to run. **We build every log splitter to be the last one you'll ever need.**

The economical **TW-P1** is perfect for home or farm. The **TW-HV1** and **TW-HV2** give you the versatility of 2 splitting positions: vertical or horizontal. With a 9-second cycle time, the **TW-2** and **TW-2HD** take wood splitting up a notch, making them ideal for landowners who produce more than 10 cords per year. Farmers and tractor owners will like the PTO-driven **TW-3**. Because it's self-contained, it can operate at idle and still have plenty of power to get the job done. The **TW-3HD** is a heavier duty version of the TW-3. It generates 22-tons of splitting force and comes standard with our 4-way wedge. The new **S3HD** splitter simply attaches to your existing skid steer so you can split large, unwieldy logs into manageable chunks with ease.

TW-5 and **TW-5FC** are two of the most popular and productive units in the industry. "FC" stands for fast cycle time—a blistering 6 seconds! The pro's choice, **TW-6** boasts a twin-cylinder 688cc OHV

Honda GX engine, producing 28 tons of splitting force with an 8-second cycle time. **The TW-7** lets an operator produce perfect firewood with its unique "box" wedge, while the **TW-10** has 50 tons of power with a 60 GPM pump. The remote control unit comes with a 60 GPM pump that generates over 60 tons and a 46 second cycle time.

Our newest addition, the **TW-C1** is for the homeowner who needs to split a cord or so. In addition, it's great for busting pieces for the small foreign stoves.

More About TW-7

Q: What Makes a TW-7 Different?

A: It's a machine that specializes in producing six perfectly sized campfire logs—in 8 seconds flat! A "box" wedge with five vertical blades regulates the width while a horizontal blade controls the height. With 28 tons of force and 8-second cycle time, the **TW-7** is a testament to Timberwolf's ability to produce a large, diverse line of log splitters—each one standing on its own merits. Do the math and bundle up the profits.

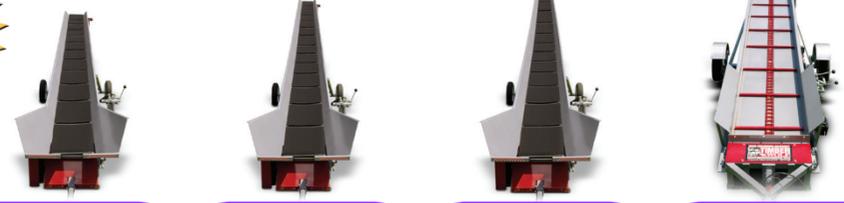

TW-7 with standard 2-way wedge is designed to cut through the gnarliest wood.

TW-7 with standard box wedge is designed for straight grain, producing perfect camp firewood.

Timberwolf fills an important position in the conveyor market with the C20 (20 ft.), C24 (24ft.), and C26 (26ft.). A heavy-duty steel frame supports 18" wide two-ply polyester Rough Top™ belting (1" T-cleats are optional). The hydraulic top drum drive gives operators greater convenience...simply stop and back up the conveyor belt for easy handling or larger chunks that need re-splitting.

Top Drum Hydraulic Drive

Our all-steel firewood conveyors, the C30 and C35HD, come standard with a hydraulic top drum drive and hydraulic lift. The wood is pulled up the steel trough by 1" square steel cleats attached to the drive chain.

Chip Separator

All of these commercial-grade firewood conveyors come standard with the reliable Honda GX engine. They can also be powered by your firewood processor's hydraulic system.
